### SESSION DESCRIPTION:

The growth of data both structured and unstructured present challenges as well as opportunities for industries and academia over the next few years. With the explosive growth of data volumes, it is essential that real-time information that is of use to the business can be extracted to deliver better insights to decision-makers, understand complex patterns etc. Data Sciences employs techniques and theories drawn from many fields within the context of mathematics, statistics, computer science, and information science. The session is expected to provide an opportunity for the researchers to meet and discuss the latest solutions, scientific results and methods in solving intriguing problems in the fields of Big Data Analytics, Data Sciences and Neural Networks. The conference programme will include workshops, special sessions and tutorials, along with prominent keynote speakers and regular paper presentations in parallel tracks. Contributions are expected to present original research on Big Data Analytics, Data Sciences and Neural Networks with real world applications
